Evolutionary biology is the subfield of biology that studies the evolutionary processes that produced the diversity of life on Earth, starting from a single common ancestor. These processes include natural selection, common descent, and speciation. The discipline emerged through what Julian Huxley called the modern synthesis (of the 1930s) of understanding from several previously unrelated ...

A Reflection of Health. The concept of "biological diversity" is multifaceted and complex. It includes the concept of species diversity, or the total of all species in a given area or habitat, but can also refer to genetic diversity within a species. Biodiversity can even refer to the diversity of habitats in a given region.
