Insertion element (also known as an IS, an insertion sequence element, or an IS element) is a short DNA sequence that acts as a simple transposable element. Insertion sequences have two major characteristics: they are small relative to other transposable elements (generally around 700 to 2500 bp in length) and only code for proteins implicated in the transposition activity (they are thus ...

Highlights Probiotics show strong inhibition of other probiotic strains, with a strain-specific effect. Mixtures generally effective against all three pathogens, with some variation. In 12/24 assays mixtures show greater inhibition of the pathogen than did a single component species. Biomass is an important factor in inhibition of pathogens. In the formulation of a mixture, the effect of each ...
