Chemistry is the scientific discipline involved with elements and compounds composed of atoms, molecules and ions: their composition, structure, properties, behavior and the changes they undergo during a reaction with other substances. In the scope of its subject, chemistry occupies an intermediate position between physics and biology. It is sometimes called the central science because it ...

1. Introduction. Since Watson and Crick first proposed that DNA exists as a B-form double helix 1 there has been extensive study into DNA morphology. It is now well established that DNA can adopt many different secondary structures such as alternative duplexes (including A and Z forms), triplexes, three and four way junctions and quadruplexes. 2 The best studied of these has been the G ...
