CT scan can be used for detecting both acute and chronic changes in the lung parenchyma, that is, the internals of the lungs. It is particularly relevant here because normal two-dimensional X-rays do not show such defects.

Single-photon emission computed tomography (SPECT, or less commonly, SPET) is a nuclear medicine tomographic imaging technique using gamma rays. It is very similar to conventional nuclear medicine planar imaging using a gamma camera (that is, scintigraphy). However, it is able to provide true 3D information. This information is typically presented as cross-sectional slices through the patient ...

technique, called backprojection or simple backprojection. Figure 25-16 shows that simple backprojection is a common sense approach, but very unsophisticated. An individual sample is backprojected by setting all the image pixels along the ray pointing to the sample to the same value.

Computertomografie (meestal afgekort tot CT van "computed tomography", ook wel tot CAT van "computer assisted tomography") is een tomografische onderzoeksmethode van het menselijk lichaam. Bij deze methode wordt gebruik gemaakt van röntgenstraling. De doorlaatbaarheid van het onderzochte lichaamsdeel voor de gebruikte straling wordt in een CT-scan vanuit een groot aantal hoeken rondom in een
