Distributed computing is a field of computer science that studies distributed systems. A distributed system is a system whose components are located on different networked computers, which then communicate and coordinate their actions by passing messages to one another. The components interact with one another in order to achieve a common goal.

Distributed Real-Time System Design: Theoretical Concepts and Applications Abstract: Distributed real-time system design raises new theoretical issues and application challenges, beyond those of centralized systems. Rate monotonic scheduling (RMS) theory has been successfully applied in the scheduling of centralized systems.
