This free online textbook (e-book in webspoken) is a course in basic analysis. This book started its life as my lecture notes for Math 444 at the University of Illinois at Urbana-Champaign (UIUC) in the fall semester of 2009, and was later enhanced to teach Math 521 at University of Wisconsin-Madison (UW-Madison). A prerequisite for the course is a basic proof course.

In 2006, I produced Introduction to Economic Analysis, a free, open sourced, creative-commons-licensed textbook spanning introductory and intermediate microeconomics. There were few adoptions. That there were several high profile adoptions like NYU and Harvard convinced me that the lack of adoptions was not due to the material itself, or even my exposition of the material, but instead to two ...

1. INTRODUCTION 1.1 A short introduction to Social Network Analysis. A network is made of two components : a list of the actors composing the network, and a list of the relations (the interactions between actors). As part of a mathematical object, actors will then be called vertices (nodes, in Gephi), and relations will be denoted as edges (edges, in Gephi).
