### **Professional Linux Kernel Architecture - KU ITTC**

The Linux kernel is an open-source monolithic Unix-like computer operating system kernel. The Linux family of operating systems is based on this kernel and deployed on both traditional computer systems such as personal computers and servers, usually in the form of Linux distributions, and on various embedded devices such as routers, wireless access points, PBXes, set-top boxes, FTA receivers ...

Advanced Linux Sound Architecture (ALSA) is a software framework and part of the Linux kernel that provides an application programming interface (API) for sound card device drivers.. Some of the goals of the ALSA project at its inception were automatic configuration of sound-card hardware and graceful handling of multiple sound devices in a system.

The Kernel debugging and Compile the kernel with debug info options are needed here. Another call to make generates a kernel with the modified configuration.. The results of this are basically two files: You will have a vmlinux that contains both the code and the corresponding debug information in the directory of the kernel source code. The architecture subdirectory â€“ this is arch/x86/boot ...

LXC, acronym for Linux Containers, is a lightweight Linux kernel based virtualization solution, which practically runs on top of the Operating System, allowing you to run multiple isolated distributions the same time.. The difference between LXC and KVM virtualization is that LXC doesn't emulate hardware, but shares the same kernel namespace, similar to chroot applications.
