Bekker's Derived Terramechanics Model (BDTM) is an analytical tool for evaluating vehicle off-road mobility. BDTM has been developed using Bekker's equations for vehicle soil interactions. He developed the bevameter technique to measure mechanical strength characteristics for many soil and snow conditions.

Since the performance of an off-road vehicle, defined in terms of its motion resistance, tractive effort, drawbar pull, tractive efficiency, etc., is determined by the normal and shear stresses on the vehicle-terrain interface, a central issue in terramechanics is the formulation of a mathematical model to predict the interacting forces ...
