## the electron theory a pdf

The electron is a subatomic particle, symbol  $e^-$  or  $\hat{1}^-$ , whose electric charge is negative one elementary charge. Electrons belong to the first generation of the lepton particle family, and are generally thought to be elementary particles because they have no known components or substructure. The electron has a mass that is approximately  $1/1836$  that of the proton.

Electron transfer (ET) occurs when an electron relocates from an atom or molecule to another such chemical entity. ET is a mechanistic description of a redox reaction, wherein the oxidation state of reactant and product changes.. Numerous biological processes involve ET reactions. These processes include oxygen binding, photosynthesis, respiration, and detoxification.
